Unavoidably Unsafe

Vaccines are currently classified by American tort law as “unavoidably unsafe” due to the injuries and deaths resulting from their unavoidable side effects. See, United States Supreme Court ruling in Bruesewitz v. Wyeth LLC, 562 U.S. 223, 254-55, 131 S. Ct. 1068, 1089 (2011):

“The 1986 Report expressly adopts comment k of § 402A of the Restatement of Torts (Second) (1963-1964) (hereinafter Restatement), which provides that “unavoidably unsafe” products--i.e., those that ‘in the present state of human knowledge, are quite incapable of being made safe for their intended and ordinary use’--are not defective. As ‘[a]n outstanding example’ of an ‘[u]navoidably unsafe’ product, comment k cites ‘the vaccine for the Pasteur treatment of rabies, which not uncommonly leads to very serious and damaging consequences when it is injected’; ‘[s]ince the disease itself invariably leads to a dreadful death, both the marketing and the use of the vaccine are fully justified, notwithstanding the unavoidable high degree of risk which they involve.’ Id., at 353. Comment k thus provides that ‘seller[s]’ of ‘[u]navoidably unsafe’ products are ‘not to be held to strict liability’ provided that such products ‘are properly prepared and marketed, and proper warning is given.’”

The correct synonym for “unsafe” is “dangerous”.

“Dangerous: 1: involving possible injury, pain, harm, or loss : characterized by danger, 2: able or likely to inflict injury or harm”

Dangerous vaccines are kept on the market and shielded from liability because in 1986, Congress passed special interest legislation favoring the international pharmaceutical industry.

Vaccines Contain Neurotoxins

Vaccines include legally classified neurotoxins in amounts that have never been proven safe. Vaccines are experimental because they have never followed the scientific method for testing with true placebos or a control group of entirely unvaccinated individuals.

All Vaccines Are Experimental

Vaccine regulatory approvals are supported by:

- **Fake placebos** (so-called “placebos” that contain neurotoxins),
- **Fake controls** (so-called “controls” of people who are also vaccinated),
- **Short-term testing** windows (so-called “tests” with monitoring periods as short as 3-days), and
- **Long-term passive surveillance** of vaccine injuries (so-called “surveillance” with an unknown to approximately 99% failure rate of reporting).

In this manner, vaccine science has not even evolved enough to recognize the basic dictionary definition of words, let alone become advanced enough to reach the status of “settled science”.

Educated Parents Are Less Likely To Vaccinate

“[F]urther studies are needed to discover why, for example, parents with more education are less likely to agree to vaccination than parents with less education.”

“Mothers who had less than a high school degree... were more likely to be favorable about their daughter being vaccinated.”

“Low maternal educational levels and low socioeconomic status were associated with high 4:3:1:3 series completion rates.”

Doctors and Healthcare Workers Rejecting Vaccination

“[A]cceptance of the influenza vaccination by medical personnel is low.”

“Despite almost a decade of efforts, the vaccination coverage rates registered at our hospital steadily remain unsatisfactory and very distant by the minimum objective of 75% defined by the Italian Ministry of Health. During the last influenza season (2013/14), vaccination coverage rates by occupation type resulted 30% among physicians, 11% among nurses and 9% among other clinical personnel.”

The CDC Recommended Vaccine Schedule Is Experimental

“[S]udies designed to examine the long-term effects of the cumulative number of vaccines or other aspects of the immunization schedule have not been conducted.”

“[The IOM] found a paucity of information, scientific or otherwise, that addressed the risk of adverse events in association with the complete recommended immunization schedule...”

All Vaccines Are Experimental

Vaccine package inserts applicable to the CDC Schedules of recommended vaccines (both for adults and children) evidence that each vaccine has never been clinically evaluated in humans for its long-term potential to cause cancer, impair fertility, and mutate genes.

Vaccine Side Effects Are Common

The most accurate and lawful way to describe vaccination is that it is an experimental procedure that has been falsely labeled as “safe and effective”. Vaccine side effects have been falsely labeled as “rare”.

The Council for International Organizations of Medical Sciences Working Group III sets forth the following definitions for drug adverse events:

- Very common ≥ 1/10 (≥ 10%)
- Common ≥ 1/100 and < 1/10 (≥ 1% and < 10%)
- Uncommon ≥ 1/1000 and < 1/100 (≥ 0.1% and < 1%)
- Rare ≥ 1/10,000 and < 1/1000 (≥ 0.01% and < 0.1%)
- Very rare < 1/10,000 (< 0.01%)

The Unvaccinated Control Group Is An Endangered Population

The number of individuals who remain entirely unvaccinated in America is small, estimated at approximately 1% or less of the American population.

The International Pharmaceutical Industry Is Corrupt and Untrustworthy

The international pharmaceutical industry that produces vaccines has a long-history of scientific corruption and conflicts of interest. It is a trillion dollar industry that uses aborted babies to manufacture certain vaccines, adds known neurotoxins such as aluminum and mercury to vaccines, specifically engineers newer vaccines to manipulate human DNA, and then summarily labels every single one of their finished products “safe”, without any mathematical proof that would comply with the scientific method.

The International Pharmaceutical Industry Is Corrupt and Untrustworthy (cont’d)

“For a pharmaceutical company, delaying or minimizing knowledge of a side effect of a medication has cash value. Similarly, not publishing negative studies may shift the balance of subsequent meta-analysis.”

“Journals have devolved into information laundering operations for the pharmaceutical industry”.

Drug companies donated millions to California lawmakers before a mandatory vaccine debate in order to promote mandatory vaccination.

“The global vaccine market is showing some escalating growth and it is expected that it will reach total revenues of nearly 60 billion U.S. dollars by 2020. That would be almost double the size the market had back in 2014. Driver of the growth is the increase of various infectious diseases like influenza, swine flu, hepatitis, tuberculosis, diphtheria, Ebola, and meningococcal and pneumococcal diseases.... At this moment, Pfizer’s Prevnar 13 is the world’s leading vaccine product, generating around 5.7 billion U.S. dollars of revenue.... The United States are the world’s largest national market for vaccines...”

Medical Error is the 3rd Leading Cause of Death in the United States

These People Are Sick

“Scientists have told Congress again and again that fetal tissue is the gold standard for vaccine research.”
